EDUCATION

Georgia Institute of Technology

Bachelor of Science in Computer Science, GPA: 3.6

Atlanta, GA

August 2024 – December 2027

EXPERIENCE

American Express

June 2026 – August 2026

Software Engineering Intern, Customer 360 Platform

Sunrise, FL

- Unified 3 logging systems spanning Yugabyte, Postgres, and Kafka into one observability system using OpenTelemetry and Vert.x; deployed for all customer account requests, card issuance, and linkages
- Cut incident response time from 15 to 3 minutes by replacing Postman, OpenSearch, and several admin tools with one React dashboard; integrated with Copilot, Claude, Codex, and Devin; in production for 160+ engineers
- Won 2nd of 70 teams globally at Amex's hackathon with SAGE, a LangGraph eval-harness for building and testing agent tools; deploying across Amex's 271 skills and MCPs, saving dozens of hours and millions of tokens

ProPaths | propaths.net

January 2026 – August 2026

Technical Co-Founder

Atlanta, GA

- Built an interactomics platform with expert curation at text-mining scale; benchmarking 5-10x higher interaction coverage and zero data fabrication against agents like Claude, Gemini, and Biomni
- Shipped a React & FastAPI app with an API and MCP server so research agents pull rich interaction data and pathway ontology directly, replacing StringDB lookups and raw PubMed reads at zero cost and far fewer tokens
- Reduced agent costs by 10-14x with zero quality loss through a provider-agnostic inference layer with cost-aware model routing, batched async inference, context/results caching, and tiered prompt/retry strategies

Kondra (Coca-Cola)

May 2025 – August 2025

Software Engineering Intern

Sandy Springs, GA

- Validated kOS, a new distributed OS for Coca-Cola, by building 4 novel supply-chain devices around LiDAR, RFID, ultrasonics, and payments. Coke now uses them as a permanent Digital Innovation at Global HQ
- Tackled an urgent request from AMC alongside that work and built a "Smart Shelf" for an inventory management issue in 5 weeks. Their CEO visited personally for a demo; the device is now in field trials for production
- Wrote a distributed graphics engine (streaming video/images/animations to LEDs with compositing and physics) with low-latency C++ libraries for LiDAR & RFID, syncing real-time video and sensor data across 5 devices

KSU IoT-as-a-Service Research Lab

May 2022 – August 2024

ML Researcher

Kennesaw, GA

- Invented "VitalCheck": a cuff-less blood pressure and breathing monitor with 90% accuracy across 5 metrics, a real-time web UI, and sub-50ms inference using signal processing in C++, TFLite models, and FastAPI
- First-authored a paper (AIME 2024) on a 6-month, 21 patient clinical trial I spearheaded for VitalCheck and GlucoCheck; building an automated ETL pipeline over 3,000+ CV images and 120hrs of data
- First-authored a paper (EAI Pervasive Health 2022) on "GlucoCheck," a project I led as a high schooler in a graduate research lab, reaching 90% clinical accuracy (10-20% over related work) with infrared imaging and CV

PROJECTS

Demotu | demotuapp.com

Capstone Project, Fall 2025

- Built an AI agent serving 1,000+ daily active users across trainers, gym chains, and pro sports teams; replacing manual forms for building and editing workouts with a single chat interface and real-time voice mode
- Architected an orchestrator & verifier agent, parallel worker sub-agents, tool-calling for context (biometrics, progress reports, CV movement analysis), and vector search over 10k exercises
- Tested and eliminated agent failures with an eval harness; turning conversation and vague prompts into deterministic, atomic operations with schema verification, version history, rollbacks, and error handling

TECHNICAL SKILLS

Languages: Python, Java, TypeScript & JavaScript, C/C++, SQL

AI & Agents: LangGraph, Instructor, Anthropic/OpenAI Agents SDK, PGVector, PyTorch, OpenCV

Systems & Infra: React, FastAPI, Vert.x, Spring Boot, Linux, Docker, Kafka, ElasticSearch, PostgreSQL, FreeRTOS
