EDUCATION

Georgia Institute of Technology

Bachelor of Science in Computer Science, GPA: 3.6

Atlanta, GA

Aug. 2024 – May 2027

Kennesaw State University

Pursued: Bachelor of Science in Computer Science

Marietta, GA

Aug. 2023 – May 2024

EXPERIENCE

American Express

Software Engineering Intern, Customer 360 Platform

June 2026 – August 2026

Sunrise, FL

- Unified 3 request logging systems spanning Yugabyte, Postgres, and Kafka into a single observability system using OpenTelemetry and Vert.x; solving critical data fragmentation with automated tracing
- Simplified debugging from manual use of Postman, OpenSearch, and scripts to a single React dashboard; deploying for a team of 100+ members on a platform handling all customer account requests and card issuance
- Won 2nd of 70 teams globally at Amex's AI hackathon with SAGE: a LangGraph evaluation harness for building and testing agent tools; designed to save teams dozens of hours and millions of tokens

Demotu

Software Engineer, Capstone Project

August 2025 – December 2025

Remote

- Built an AI agent serving 1,000+ daily active users across trainers, gym chains, and pro sports teams; replacing manual forms for building and editing workouts with a single chat interface and real-time voice mode
- Architected the system around a orchestrator & verifier agent, parallel worker sub-agents, tool-calling for context (biometrics, progress reports, CV movement analysis), and vector search over 10k databased exercises
- Tested and eliminated agent failures with an eval harness; turning conversation and vague prompts into deterministic, atomic operations with schema verification, version history, rollbacks, and error handling

Kondra (Coca-Cola)

Software Engineering Intern

May 2025 – August 2025

Sandy Springs, GA

- Delivered 4 next-generation devices for Coca-Cola's supply chain, leveraging advanced technologies to validate their new distributed OS in 10 weeks; resulting in a permanent Digital Innovation display at their global HQ
- Spearheaded an urgent request from AMC by concurrently developing a "Smart Shelf" for a critical cartridge management issue in just 5 weeks; leading to a visit from their CEO that started field-trials for production
- Architected a low-latency, distributed system for all devices; integrating Java applications on Raspberry Pis with a real-time messaging protocol in C/C++ to manage ESP32s with firmware for LEDs, RFID, and LiDAR
- Developed an animation engine in Java & C++, featuring a layered rendering pipeline, compositing, physics simulations, API endpoints, and real-time events; achieving 80fps on 900 LEDs across 12 separate arrays

KSU IoT-as-a-Service Research Group

ML Researcher

August 2023 – August 2024

Kennesaw, GA

- Created "VitalCheck", a cuff-less blood pressure and breathing monitor that hits 90-97% accuracy across 5 biomarkers, with sub-50ms inference from C++ signal processing and quantized TFLite models
- First-authored a paper (AIME 2024) on results from a 6-month clinical trial on VitalCheck and GlucoCheck with 20+ patients; using an ETL pipeline to process 3,000+ CV images and 120hrs of time-series data

ML Research Intern

May 2022 – August 2022

- First-authored a paper (EAI Pervasive Health 2022) on "GlucoCheck," a medical glucometer project I led as a high schooler, reaching 90% clinical accuracy (10-20% over related work) with infrared imaging and CV

TECHNICAL SKILLS

Languages: Python, Java, C/C++, Ruby, JavaScript, SQL, HTML/CSS

Libraries: React, Rails, Django, Pandas, PyTorch, OpenCV, TFLite, Numpy, Scipy

Software: Linux, Git, Docker, AWS (EC2, S3, Lambda), MySQL, InfluxDB, Grafana, Maven, Conda

Hardware: ESP32, Arduino, Raspberry Pi, Soldering, Wire Wrapping, 3D-Printing
